

Maha E-Seva Kendra

Real-world service centre website for Nerul, Navi Mumbai

Purpose: Define the complete product, business, content, service, trust, conversion, SEO, performance and operational requirements before development begins.

Document	01 — Project PRD
Product	Maha E-Seva Kendra Website
Business	Maha E-Seva Kendra / Vinod Maha E-Seva Kendra
Primary location	Shop No. 15, Janta Market Bridge, Nerul East, Sector 3, Nerul, Navi Mumbai, Maharashtra 400706
Primary phone	99877 72424
Additional phone	88507 72424
Google rating provided	4.9 / 5 from 1,466 reviews
Service catalogue	32 listed services
Primary objective	Turn local search and direct visitors into calls, WhatsApp enquiries and centre visits
Priority	Fast, trustworthy, professional, mobile-first, SEO-friendly and easy to maintain

Important: This document is the product/business source of truth. Technical implementation details belong in the Technical Architecture document; visual specifications belong in the Design System & UX document; execution order belongs in the Implementation Phases document.

Document Map

Section	Purpose
1. Executive Summary	What the website is and the outcome it must create
2. Business Context	Real-world business facts and constraints
3. Product Vision & Goals	What success means
4. Target Users & User Journeys	Who uses the website and why
5. Information & Content Model	How services, schemes, blogs, FAQs and business information work
6. Service Catalogue	All 32 services and current service charges
7. Functional Requirements	Detailed website capabilities
8. Trust & Conversion	Calls, WhatsApp, reviews, pricing, location and enquiry flow
9. SEO & Local Discovery	Search-oriented product requirements
10. Performance & Accessibility	Non-functional requirements
11. Content Governance	Accuracy, freshness and update rules
12. Scope & Non-Scope	What is and is not part of this release
13. Acceptance Criteria	Definition of a successful product
14. Future Enhancements	Ideas intentionally separated from the first release

1. Executive Summary

Maha E-Seva Kendra is a real local service centre in Nerul, Navi Mumbai that helps residents with government certificates, identity documents, applications, licences, banking, insurance, digital services, photography/printing-related services and government scheme/job-form assistance.

The website is not intended to look like a generic government portal. It is a **professional local-business service website** that makes it easy for a resident to understand what services are available, see the service charge, know what documents may be required, understand the broad process, discover current schemes and updates, read useful guides, verify the centre's location and contact the centre quickly.

The website must combine **trust + clarity + speed + local SEO + conversion**. Animation and visual polish are important, but they must never make the website feel slow, confusing or unreliable.

The website will have a reusable service system rather than 32 separately designed pages. Service information is data-driven so that adding or updating a service does not require rebuilding the UI.

Primary Product Promise

Find the service → understand the requirements → see the price → trust the centre → contact or visit.

2. Business Context

The provided Google Maps information identifies the business as **Maha E Seva Kendra Domicile Certificate**, categorized as a district government office, with the address below. The owner-provided description lists 32 services and corresponding service charges.

Address: Shop No-15, Janta Market Bridge, Nerul East, Sector 3, Nerul, Navi Mumbai, Maharashtra 400706.

Phone numbers supplied: 099877 72424 and 8850 77 24 24.

Google Business information supplied: 4.9 rating and 1,466 reviews at the time of project planning. These values must be treated as business-provided reference data and should not be hardcoded as permanently current facts.

Business positioning: local, accessible assistance for people who need help completing online government/service processes, preparing documents and submitting applications.

Business Constraints

- Government requirements, fees and processing times can change. The website must not present uncertain information as a guaranteed government rule.
- The centre's own service charge and government fee must be distinguished wherever both may apply.
- The website should not imply that the centre itself is a government department unless that status is formally established and the wording is approved.
- The website must avoid asking users to upload sensitive identity documents through an ordinary contact form unless a secure document workflow is deliberately implemented later.
- The site must work extremely well on mobile because local-service users are likely to discover and contact the business from a phone.

3. Product Vision & Goals

Vision: Build the most useful, trustworthy and frictionless online presence for this local E-Seva Kendra—one that serves both a first-time visitor searching for a single certificate and a returning resident who wants to quickly contact the centre.

Primary Goals

- 1 Make all 32 services discoverable within a few seconds.
- 2 Show service charges clearly and transparently.
- 3 Explain documents and the broad application process in simple language.
- 4 Make WhatsApp and phone contact available at high-intent points.
- 5 Make the physical location, opening hours and directions easy to find.
- 6 Create an expandable schemes/update section for frequently changing government opportunities.
- 7 Create an SEO-ready blog that answers genuine user questions and links readers to relevant services.
- 8 Establish strong local SEO signals around Nerul and Navi Mumbai.
- 9 Load quickly and remain usable on low-to-moderate mobile connections.
- 10 Make future content updates possible without redesigning service pages.

Secondary Goals

- Show genuine customer trust signals such as reviews and service experience.
- Explain why customers should choose this centre without exaggerated claims.
- Provide a clean FAQ and documents guidance system.
- Provide a professional visual identity using the selected second colour palette from the approved design direction.
- Create a foundation that can later connect to a CMS/admin system.

Success Indicators

Area	Success condition
Service discovery	A user can reach any of the 32 services from the Services area and search/filter quickly.
Conversion	High-intent pages expose call/WhatsApp/contact actions without forcing users to search for them.
Trust	Address, phone, pricing context, reviews and business information are visible and consistent.
SEO	Every important service and content page has a unique URL, metadata, internal links and structured content.
Performance	No decorative feature should materially compromise initial loading or mobile usability.
Maintainability	A service can be updated from data/content without duplicating a new page design.

4. Target Users & User Journeys

Primary Audience

- Residents of Nerul, Navi Mumbai and nearby areas looking for assistance with government or online services.
- People who know the service name but do not know the documents/process.
- People searching by problem, such as 'need domicile certificate' or 'PAN card apply'.
- Students, workers, families, senior citizens and small business owners who need document/application assistance.
- Existing customers returning to check another service, price, scheme or contact detail.

Core User Journeys

Journey	Expected flow
Find a service	Google/search/social → relevant service page → requirements → price → WhatsApp/call → visit
Browse all services	Home → All Services → search/filter/category → service detail → CTA
Check documents	Search/service page → Documents Required → prepare documents → contact centre if unsure
Check a scheme	Home/Schemes → scheme detail → eligibility/benefits/documents/deadline → official source → contact if assistance is needed
Read a blog	Search → article → quick answer → detailed guide → related service → CTA
Visit centre	Home/Contact → address + map preview + directions → physical visit
Ask a question	Any page → WhatsApp/Call/Contact form → centre responds

5. Information & Content Model

Core Content Types

Content type	Purpose	Primary route pattern
Service	Commercial/high-intent explanation of one service	/services/{slug}
Category	Groups related services and improves discovery	/services/category/{category}
Scheme	Time-sensitive government scheme/update information	/schemes/{slug}
Blog article	Search-driven educational content	/blog/{slug}
FAQ	Common questions and objections	/faq and service-level FAQ
Documents guide	Cross-service preparation help	/documents
Business pages	Trust, location and contact	/about, /contact

Service Information Model

Every service should support at minimum: name, slug, category, short description, full description, service charge, government-fee note where applicable, documents, eligibility guidance, process steps, processing-time guidance, FAQs, related services, related blog content, icon/visual, popularity flag, availability/status, SEO title/description and last-updated information.

Content Accuracy Rules

- Do not invent government fees, eligibility, processing times or document requirements.
- When requirements can vary, use clear language such as 'requirements may vary depending on the application'.
- When a government fee is separate from the centre's service charge, show the distinction.
- For schemes and time-sensitive content, show a last-updated date and link to the relevant official source when appropriate.
- Do not represent the centre's assistance fee as a government fee.
- Do not claim guaranteed approval, guaranteed processing time or guaranteed government outcome.

6. Complete Service Catalogue

The following catalogue is based on the owner-provided service list and pricing. Prices are **service charges supplied by the business**; they should be verified by the business before final publication. Where the source contains

ambiguous wording or a missing price, the UI must not invent a value.

#	Service	Category	Current supplied price	Product note
1	Aadhaar Smart Card	Identity / Documents	■40	Aadhaar smart-card related assistance.
2	PAN Card	Identity / Documents	■150	PAN card application assistance.
3	Voter ID	Identity / Documents	■100	Voter ID application/assistance.
4	Passport Online Application	Travel / Documents	■300 + ■1,500 government fee	Online passport application assistance; government fee shown separately as supplied.
5	Driving Licence	Licences	■300	Driving licence related online assistance.
6	ABHA Health Card	Health	■50	ABHA health card assistance.
7	Ayushman Bharat Card	Health / Government Schemes	■50	Ayushman Bharat card assistance.
8	Senior Citizen Card	Government / Identity	■100	Senior citizen card assistance.
9	E-Shram Card	Government / Labour	■50	E-Shram card assistance.
10	UAN / PF Card	Employment / Labour	■100	UAN/PF related card/service assistance.
11	Domicile Certificate	Certificates	■300	Domicile certificate application assistance.
12	Income Certificate	Certificates	■300	Income certificate application assistance.
13	Residence Certificate	Certificates	■300	Residence certificate application assistance.
14	Non-Creamy Layer Certificate	Certificates	■700	Non-creamy layer certificate assistance.
15	Caste Certificate	Certificates	■300	Caste certificate application assistance.
16	Police Verification	Verification	■500	Police verification related assistance.
17	E-Registration Rent	Property / Registration	■1,000	Rent/e-registration related assistance.
18	Lost Aadhaar / PAN Card	Identity / Recovery	■100 / ■200	Owner supplied combined service; final UI should label the respective charge clearly.
19	Small Scale Business (MSME) Licence	Business	■500	MSME/business registration assistance.
20	Shop & Establishment Licence (Gumasta)	Business	■500	Shop and Establishment/Gumasta related assistance.
21	Name Change E-Gazette	Legal / Documents	■1,200	Name-change e-Gazette assistance.
22	Banking Related Services	Banking	■100	General banking assistance; exact service scope should be clarified before detailed copy is published.
23	Health Insurance	Insurance	■100	Health insurance related assistance.
24	Motor Insurance	Insurance	■100	Motor insurance related assistance.
25	Digital Life Certificate for Pensioners	Pension / Digital	■200	Digital life certificate assistance for pensioners.
26	Passport Size Photo	Photography	■100 / 30 photos	Owner supplied as 30 photos for ■100.

#	Service	Category	Current supplied price	Product note
27	A4 & Card Lamination	Printing / Documentation	■10 / 5	Owner supplied as 5 lamination units for ■10.
28	Money Transfer & Withdrawal	Banking / Financial	Price not supplied	Service listed by owner; price must be confirmed before publication.
29	Digital Album Photo Quality of Family Documents	Digital / Documentation	Price not supplied	Digital album/scan-style service; exact offering and price should be confirmed.
30	Government Job & Scheme Online Form Filling	Applications	Price not supplied	Online form filling assistance for government jobs and schemes; price should be confirmed.
31	All Types of Bank Loan	Banking / Finance	Price not supplied	Bank loan assistance; scope and pricing must be confirmed.
32	Insurance Services	Insurance	Price not supplied	General insurance assistance; scope and pricing must be confirmed.

Pricing Presentation Rules

- Use 'Our Service Charge' for the centre's own fee.
- Use 'Government Fee' separately where applicable.
- For services with no supplied price, display 'Contact us for current charges' only after business approval; do not fabricate a number.
- Pricing must be easy to find on the service page and should also be summarized on service cards where appropriate.
- Prices must be stored in the service data model so they can be updated once rather than edited across many components.

7. Functional Requirements

ID	Requirement area	Requirement
FR-01	Homepage	Present business identity, service discovery, schemes, trust, pricing highlights, blog, location, FAQ and contact CTAs.
FR-02	Global navigation	Provide clear navigation to Home, Services, Schemes, Blog and supporting pages; mobile navigation must be easy to operate.
FR-03	Service catalogue	Display all 32 services using reusable cards and categories.
FR-04	Service search	Allow users to search services by name/keyword.
FR-05	Service filters	Allow filtering by category; filters must remain usable on mobile.
FR-06	Service detail	Every service must have a dedicated page with description, price, documents, process, FAQ and contact actions.
FR-07	Documents	Provide document requirement lists with caveats where requirements can vary.
FR-08	Process	Show an understandable high-level step-by-step process.
FR-09	Pricing	Show centre charge and separate government fee notes where relevant.
FR-10	Related content	Link services to related services and relevant blog articles.
FR-11	Schemes	Provide a frequently updated scheme section with status and last-updated information.
FR-12	Blog	Provide SEO-focused educational articles with category, metadata and service CTAs.

ID	Requirement area	Requirement
FR-13	FAQ	Provide global and service-specific FAQs using accessible accordions.
FR-14	Contact	Provide contact form, phone and WhatsApp actions.
FR-15	Location	Show address, opening hours, location preview and directions.
FR-16	Reviews	Show genuine review/trust information without fabricating or modifying customer statements.
FR-17	WhatsApp	Provide contextual WhatsApp actions on high-intent pages plus a non-obstructive floating action.
FR-18	Mobile CTA	On mobile, keep call/WhatsApp actions readily accessible without blocking content.
FR-19	SEO	Every indexable page must have unique title, description, canonical and appropriate structured data.
FR-20	Performance	Non-critical third-party content such as interactive maps must not block initial rendering.
FR-21	Accessibility	Keyboard navigation, focus states, readable contrast and reduced-motion support are required.
FR-22	Error handling	Provide a useful 404 and graceful empty/error states.

8. Trust & Conversion Requirements

The website is a lead-generation and visit-driving website. A beautiful interface without a clear conversion path is not successful.

Primary Conversion Actions

- Call the centre.
- Start a WhatsApp conversation.
- Get directions.
- Submit a simple enquiry form.
- Visit the physical centre.

Conversion Placement

Location	Required CTA
Homepage hero	Explore Services + WhatsApp/Contact
Service card	View Details
Service detail hero	WhatsApp + Call
Pricing section	WhatsApp / Ask about this service
After documents/process	Contact / WhatsApp
Blog article	Related service + WhatsApp
Scheme page	Related service / contact for assistance
Contact page	Call + WhatsApp + Directions
Mobile global UI	Persistent but unobtrusive Call/WhatsApp action

Trust Signals

- Clear physical address.
- Phone numbers.
- Google Maps/directions.
- Genuine customer reviews or a link to the business profile.
- Transparent service charges.
- Clear distinction between centre fees and government fees.
- Last-updated information for changing schemes/content.
- Professional but non-governmental business identity unless official government status is explicitly established.

9. SEO & Local Discovery Requirements

SEO is a product requirement, not a post-launch add-on. The architecture must make each important service independently discoverable.

SEO Page Types

Page	SEO purpose
Homepage	Brand + local discovery: Maha E-Seva Kendra / E-Seva Kendra in Nerul
Service page	Specific service + local/high-intent queries
Category page	Broader service discovery
Scheme page	Current scheme/search intent
Blog article	Question/informational search intent
FAQ	Common user questions
Contact/About	Local business trust and entity information

Local SEO Requirements

- Keep business name, address and phone consistent throughout the site.
- Provide a crawlable contact/location page.
- Provide directions to the physical location.
- Implement appropriate LocalBusiness structured data after confirming exact business details.
- Use local wording naturally around Nerul and Navi Mumbai; do not create thin pages for every nearby locality solely for SEO.
- Create meaningful internal links between services, blogs, schemes and FAQs.
- Create an XML sitemap and robots.txt.
- Connect the site to Google Search Console after deployment.
- Use unique page titles and descriptions; never copy the same metadata to all 32 services.

Content SEO Rules

- Write for users first; keywords should follow search intent naturally.

- Each service page should answer: what it is, who it is for, documents, process, service charge, government fee caveat, FAQs and how to get help.
- Blog articles should answer real questions and link back to relevant services.
- Government-related content must show freshness and link to official sources where appropriate.
- Avoid thin, duplicated or AI-like filler content.

10. Performance, Accessibility & Quality Requirements

Performance is a first-class product requirement. The visual system must be implemented in a way that feels premium without creating a heavy bundle or delaying content.

Performance Requirements

- Use optimized responsive images and modern formats such as WebP/AVIF where supported.
- Lazy-load below-the-fold media.
- Do not load a full interactive map on initial page load; use a lightweight preview and load the map on demand.
- Avoid large background videos and unnecessary WebGL/3D effects.
- Use animation sparingly and prefer CSS transforms/opacity where possible.
- Avoid loading multiple icon libraries or duplicate UI libraries.
- Use code splitting/lazy loading for routes where beneficial.
- Minimize third-party scripts and load analytics non-blockingly.
- Optimize fonts and avoid unnecessary font weights.
- Do not let animations delay access to content.
- Measure the production build with Lighthouse/PageSpeed and fix major regressions before launch.

Accessibility Requirements

- Use semantic HTML.
- All interactive controls must be keyboard accessible.
- Visible focus states are required.
- Buttons and links must have clear labels.
- Images need meaningful alt text when they convey information; decorative images should not add noise.
- Text/background contrast must be readable.
- Respect prefers-reduced-motion.
- Do not encode essential information only through colour.
- Forms need clear labels and useful validation/error messages.

11. Content Governance & Update Model

Because schemes, government processes and pricing can change, the website must be treated as an actively maintained business asset.

Update Priorities

Content	Expected maintenance
Service price	Update whenever the centre changes its charge
Documents	Review when government requirements change or when the centre identifies a change
Schemes	Review frequently; show status and last updated date
Blog	Update time-sensitive articles rather than publishing duplicates where practical
Business hours	Update immediately when the centre changes schedule
Phone/address	Update immediately if business details change
Reviews	Use authentic/recent information; do not fabricate

Recommended Content Workflow

- 1 Identify change or new information.
- 2 Verify against the relevant official source/business owner.
- 3 Update the structured content record.
- 4 Update 'last updated' information where appropriate.
- 5 Check related service/blog links.
- 6 Publish.
- 7 Spot-check mobile rendering and SEO metadata.

12. Scope & Non-Scope

In Scope — First Product Release

- Professional responsive website.
- Homepage and global navigation.
- All 32 services with reusable service pages.
- Service categories, search and filters.
- Service documents, process, pricing and FAQs.
- Government schemes/update section.
- SEO-focused blog.
- Global and service FAQs.
- Contact/enquiry form.
- WhatsApp and phone CTAs.
- Location/directions section.
- Reviews/trust section.
- Technical SEO foundation.
- Performance and accessibility optimization.

Explicitly Out of Scope Unless Separately Approved

- A full government application processing platform.

- Direct integration with government portals.
- Payment gateway for government fees.
- Customer account/login system.
- Uploading and storing Aadhaar, PAN or other sensitive documents through the public website.
- Automated legal/government eligibility decisions.
- Guaranteed application status tracking.
- A complex CMS/admin dashboard in the initial static build unless separately specified.
- A full CRM.
- Fake testimonials, fabricated government affiliations or fabricated scheme information.

13. Product Acceptance Criteria

The product is ready for launch only when all critical criteria below pass.

- All 32 services are represented accurately in the service catalogue.
- Every service has a unique, clean URL and uses the common service-detail template.
- No service has a fabricated price; missing prices are clearly marked for business confirmation.
- The website clearly distinguishes centre service charges from government fees.
- A user can search/filter the service catalogue on mobile and desktop.
- Every service page contains the required sections: description, pricing, documents, process, FAQ and contact action, subject to available/verified content.
- Schemes support status and last-updated information.
- Blog articles have unique URLs, metadata, internal links and service CTAs.
- Business name/address/phone are consistent.
- Call, WhatsApp and directions actions work correctly.
- Contact form validates input and handles success/failure states.
- No sensitive document collection is implemented through the basic enquiry form.
- The website is responsive across mobile, tablet and desktop.
- Keyboard navigation and reduced-motion behavior work.
- No major broken links, console errors or missing routes exist.
- Sitemap, robots and canonical metadata are present.
- Relevant structured data is implemented and validated.
- Images are optimized and non-critical third-party resources are deferred.
- The production build passes performance review without major avoidable regressions.
- The visual design follows the approved colour palette and design system.
- Animations enhance hierarchy and feedback rather than delaying or obscuring content.

14. Future Enhancements — Deliberately Not Part of the First Build

These ideas may become valuable later but must not cause scope drift during the first website build.

- Admin/CMS dashboard for staff to update services, prices, schemes, blogs and FAQs.
- Lead/enquiry dashboard with status tracking.
- Secure document upload workflow with explicit privacy/security design.
- Automated WhatsApp enquiry templates and lead routing.
- Service appointment/request booking.
- Customer notification system.
- Multilingual content, especially Marathi/Hindi, if the business confirms the language strategy.
- Search analytics to identify the most requested services and questions.
- Automatic reminders to review scheme pages or expired deadlines.
- Integration with verified official APIs where legally and technically appropriate.

15. Final Product Principle

The website should feel like a highly polished local service desk—not a generic template, not a government portal, and not an over-animated tech demo. Every design and engineering decision should make one of four things better: **understanding, trust, speed, or conversion.**

The next project documents should build directly on this PRD: the Design System & UX document defines the visual/interaction language; the Technical Architecture document defines the implementation; and the Implementation Phases document controls execution so Antigravity does not drift outside the approved plan.
